## Traffic Calming Criteria

| Criteria          | Threshold            |                                                            | Notes                                                                                                                                                   |
|-------------------|----------------------|------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
|                   | Local Road           | Collector/Tertiary Arterial                                |                                                                                                                                                         |
| Grade             | < 8%                 |                                                            | If the grade is equal to or greater than 8%, traffic calming is not permitted                                                                           |
| Collision History | ≥ 6                  | ≥ 12                                                       | Number of collisions within the last three years involving vulnerable road users and/or which may be potentially corrected by traffic calming measures. |
| Volume            | ≥ 900                | ≥ 3,000 vpd (Collector)<br>≥ 5,000 vpd (Tertiary Arterial) | Two-way AADT Volumes                                                                                                                                    |
| Speeds            | ≥ posted speed limit |                                                            | 85 <sup>th</sup> percentile speed                                                                                                                       |
| Non-Local Traffic | ≥ 30%                |                                                            | 'Cut-through traffic'                                                                                                                                   |
