

He will be on antibiotics and pain meds for almost 2 weeks. He is very sore and one wound is partially through muscle, so vet said that he will have nerve pain for a while. He also has a penrose drain in ~~the~~ the larger wound to reduce swelling etc. This dog [REDACTED] is always vicious towards me as well, snapping at me when I cut the grass by that side of the fence. He has jumped the fence at our friends english bulldog & my parents jacks russel terrier while they were playing together. He bit [REDACTED] hand over the fence on a separate occasion. He barks and growls at me bringing in groceries and he almost bit my leg while I was planting a tree on the fence line.

[REDACTED]
